### Stopping Approach

Quitting your medicine all at once can make you feel sick, as if you had the flu (e.g., headache, dizziness, light-headedness, nausea or anxiety).

<table>
<thead>

### What You Should Know

**Will this medicine work for me?**
- The antidepressants presented in this decision aid all work the same for treating depression.
- Most people with depression can find one that can make them feel better.
- 6 out of 10 people will feel better with the first antidepressant they try and the rest will have to try other antidepressants before they find the one that is right for them.

**How long before I feel better?**
- Most people need to take an antidepressant regularly for at least 6 weeks to begin to get the full effect.

**Understanding side effects**
- Most people taking antidepressants have at least one side effect.
- Many side effects go away after a few weeks, but some only go away after you stop the medicine.
Depression medicines may cause some:
- constipation, diarrhea and nausea
- increased risk of suicidal thoughts and behaviors (18- to 24-year-olds)
- harm to an unborn child
- risk of developing serotonin syndrome, a potentially life-threatening condition
- possible drug-drug interactions

**Keep in Mind**

- **Citalopram** (Celexa®)
  - Can cause problems with your heart
- **Escitalopram** (Lexapro®)
  - Currently no other issues
- **Fluoxetine** (Prozac®)
  - More likely to interact with other drugs you are taking
  - Higher risk of seizures
- **Fluvoxamine** (Luvox®)
  - More likely to cause diarrhea
- **Paroxetine** (Paxil®)
  - If you have high blood pressure
- **Sertraline** (Zoloft®)
  - More likely to cause constipation, diarrhea or nausea
- **Desvenlafaxine** (Pristiq®)
  - Tell your doctor if you have high blood pressure
  - Tell your doctor if you have high blood pressure
- **Duloxetine** (Cymbalta®)
  - Can help with pain
  - Higher risk of seizures
- **Venlafaxine** (Effexor®)
  - Can cause problems with your heart
  - Tell your doctor if you have high blood pressure
- **Bupropion** (Wellbutrin®)
  - Starts to work more quickly
  - Higher risk of seizures
- **Mirtazapine** (Remeron®)
  - Can help with pain
  - If you are elderly, this medication may not be the best option

**Cost**

These figures are estimates and are for comparative reference only. Actual out-of-pocket costs vary over time, by pharmacy, insurance plan coverage, preparation and dosage.

- **Citalopram** (Celexa®) $4 / month – Superstores drug program
- **Escitalopram** (Lexapro®) $100 / month
- **Fluoxetine** (Prozac®) $4 / month – Superstores drug program
- **Fluvoxamine** (Luvox®) $75 / month
- **Paroxetine** (Paxil®) $4 / month – Superstores drug program
- **Sertraline** (Zoloft®) $25 / month
- **Desvenlafaxine** (Pristiq®) $150 / month – No generic available
- **Duloxetine** (Cymbalta®) $150 / month
- **Venlafaxine** (Effexor®) $125 / month
- **Bupropion** (Wellbutrin®) $50 / month
- **Mirtazapine** (Remeron®) $50 / month
- **Amitriptyline or Nortriptyline** (Elavil® or Aventyl HCI®) $4 / month – Superstores drug program

**Additional considerations**

- **Citalopram** (Celexa®)
  - Can cause problems with your heart
- **Escitalopram** (Lexapro®)
  - Currently no other issues
- **Fluoxetine** (Prozac®)
  - More likely to interact with other drugs you are taking
  - Higher risk of seizures
- **Fluvoxamine** (Luvox®)
  - More likely to cause constipation, diarrhea or nausea
  - Not officially recognized as a treatment for Major Depressive Disorder
- **Paroxetine** (Paxil®)
  - If you are pregnant, this medicine is more likely to cause problems with your unborn child
  - More likely to cause diarrhea
- **Sertraline** (Zoloft®)
  - More likely to cause constipation, diarrhea or nausea
  - Can help with pain

**Sexual Issues**

Some people may experience loss of sexual desire (libido) or loss of ability to reach orgasm because of their antidepressant.

- **Citalopram** (Celexa®)
  - Less libido
- **Escitalopram** (Lexapro®)
  - Normal libido
- **Fluoxetine** (Prozac®)
  - More libido
- **Fluvoxamine** (Luvox®)
  - More libido
- **Paroxetine** (Paxil®)
  - More libido
- **Sertraline** (Zoloft®)
  - More libido
- **Desvenlafaxine** (Pristiq®)
  - More libido
- **Duloxetine** (Cymbalta®)
  - Normal libido
- **Venlafaxine** (Effexor®)
  - Less libido
- **Bupropion** (Wellbutrin®)
  - Less libido
- **Mirtazapine** (Remeron®)
  - Normal libido
- **Amitriptyline or Nortriptyline** (Elavil® or Aventyl HCI®)
  - More libido
